

BioBoard™

Your choice for an environmentally friendly printing substrate.

Cross-section of BioBoard™ with white printable surface

PlyVener Products has manufactured environmentally sound products since 2000 since they introduced PlyCorr™ and MiracleBoard® into the marketplace.

BioBoard™ is part of the same family of products and is specifically designed for the printing industry. It offers the benefits of traditional sheet material and is extremely lightweight due to the special core properties.

BioBoard™ can be easily cut, joined, and drilled with traditional tools and fasteners. Its light weight enables large sheets to be easily maneuvered and carried by one person.

Available in stock or custom sizes, BioBoard™ can meet your needs. It also gives you an opportunity to make a sound choice for the environment.

It's So Easy!

Specifications

- Standard sizes are 4' x 8', 4' x 10' and 5' x 8'
- Cut-to-size saw accommodates custom orders in line
